Software Reuse Portal

SoftwareReuse.nasa.gov

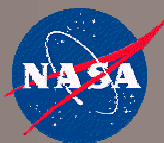

Ryan Gerard

-
- Source of Software Reuse Resources targeted to the Earth Science community.
 - Source for upcoming News and Events.
 - Raise awareness of software reuse practices and theory.
 - Platform to exchange and share resources with each other.

-
- Initial prototype of the portal created using Microsoft Sharepoint
 - Live version using Plone
 - Open Source Content Management System
 - Update content using a simple browser interface
 - NASA Affinity “skin” added
 - First website to use the new DSWG server (kathy.gsfc.nasa.gov)

http://www.sciencedatasystems.org/seeds/wg/reuse/public/default.aspx

Software Reuse

Welcome to the Earth Science Data System Software (ESDS) Reuse Portal. Please visit the public [ESDS Working Groups home page](#) for more information.

Software reuse can help the science community by reducing software development timescales, reducing costs, and contributing to the dissemination of knowledge and expertise. This Software Reuse Portal has been established by the Reuse Working Group to bring together a collection of resources that will facilitate reuse within the Earth science community. Over the next few months we will be researching a variety of resources in the Earth and Space Science reuse community. Our long-term goal is to establish a knowledge sharing community for software reuse in Earth science and, possibly, to establish a "marketplace" for reusable software development artifacts.

We have completed our survey to better understand the practice of software reuse within the Earth Science community. Results will be published in the near future.

For more information, please visit our [News](#), [Site Map](#), [About Us](#), and/or [Contact](#) page.

 OOS TECH 2005
Baltimore, MD,
2005-10-24

Open source projects support a collaborative development model whereby developers from multiple organizations can read, modify, and redistribute the source code. In the process of doing this the software evolves as people improve it, adapt it, and fix bugs. Proponents of the open source development model claim that, in many ways, it is superior to the closed source approach. An active open source development community can develop software with superior stability, reliability, and security to that developed using other development models. This collaborative development model can also be particularly attractive to the scientific community where scientific advances are often the result of the combined efforts of researchers in many different organizations.

The Reuse Working Group has identified traditional software licensing mechanisms as a potential barrier to software reuse. Traditional licensing typically requires the reuser to negotiate usage terms and conditions with the intellectual property owner every time that they want to reuse something. This can often be a time very consuming and arduous process. Greater use of open source licensing will help simplify the dissemination of software to the scientific community and promote a more collaborative development model for scientific software.

We recognize that open source licensing is not appropriate for all software. For example, the presence of proprietary code or export control restrictions may be valid reasons for choosing not to go open source. However, where proprietary technology or other intellectual property considerations preclude open source licensing, we would encourage you to make software available for reuse by the community using some other licensing mechanism that does not necessarily expose the source code.

Are there other links that you think should be listed here? Please let us know if there are other catalogs or repositories that are relevant to the Earth science community that we may want to list on this site. Any catalogs or repositories should contain a significant number of reusable software assets that focus on Earth science.

Currently, we are not able to list links to commercial products.
